## 110V Input Micro Family

### DC-DC Converter Module

#### Features

- DC input range: 66 – 154 V (continuous)
- Isolated output
- Encapsulated circuitry for shock and vibration resistance
- Extended temperature range (-55 to +100 °C)
- Input surge withstand: 250 V for 100 ms
- DC output: 3.3 – 48 V
- Programmable output: 10 to 110%
- Regulation: ±0.3% no load to full load
- Efficiency: Up to 87%
- Maximum operating temp: 100 °C, full load
- Power density: up to 60 W per cubic inch
- Height above board: 0.43 in. (10,9 mm)
- Parallelable, with N+M fault tolerance
- Low noise ZCS/ZVS architecture
- RoHS Compliant (with F or G pin option)

Shown actual size:  
2.28 x 1.45 x 0.5 in  
57,9 x 36,8 x 12,7 mm

#### Product Overview

These DC-DC converter modules use advanced power processing, control and packaging technologies to provide the performance, flexibility, reliability and cost effectiveness of a mature power component. High frequency ZCS/ZVS switching provides high power density with low noise and high efficiency.

#### Applications

Railway/Transportation system applications including communications systems, information display, lighting, control systems, ticket machines, passenger entertainment, public address systems, door control, industrial power systems and power generation systems.

For details on proper operation please refer to the [Design Guide & Applications Manual for Maxi, Mini, Micro Family](#).

# PRIMARY CONTROL - PC PIN

## Module Enable/Disable

The module may be disabled by pulling PC to 0 V (2.3 V max) with respect to the -Input. This may be done with an open collector transistor, relay, or optocoupler. Converters may be disabled with a single transistor or relay either directly or via "OR'ing" diodes for 2 or more converters. See Figure 2.

## Primary Auxiliary Supply

During normal operation only, the PC Pin can source 5.7 V @ 1.5 mA. In the example shown in Figure 4, PC powers a module enabled LED.

Figure 2 — Module enable/disable.

Figure 4 — LED on-state indicator.

Figure 6 — Isolated on-state indicator.

## Module Alarm

The module contains "watchdog" circuitry which monitors input voltage, operating temperature and internal operating parameters. In the event that any of these parameters are outside of their allowable operating range, the module will shut down and PC will go low. PC will periodically go high and the module will check to see if the fault (as an example, Input Undervoltage) has cleared. If the fault has not been cleared, PC will go low again and the cycle will restart. The SC pin will go low in the event of a fault and return to its normal state after the fault has been cleared. See Figures 3 and 5.

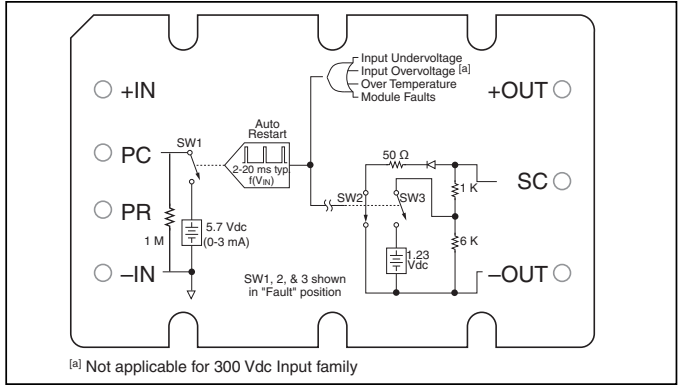

Figure 3 — PC/SC module alarm logic.

Figure 5 — PC/SC module alarm timing.

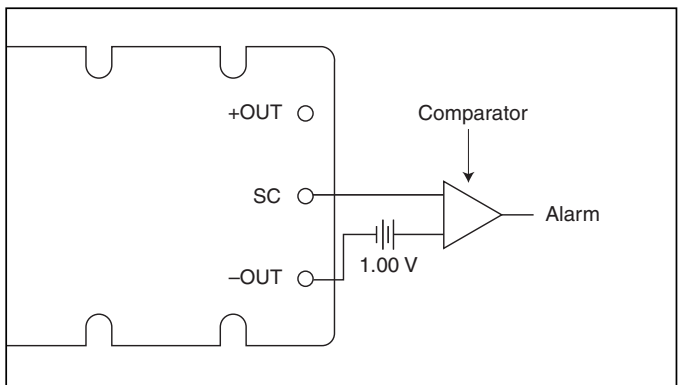

Figure 7 — Secondary side on-state indicator.

## SECONDARY CONTROL - SC PIN

### Output Voltage Programming

The output voltage of the converter can be adjusted or programmed via fixed resistors, potentiometers or voltage DACs. See Figure 8.

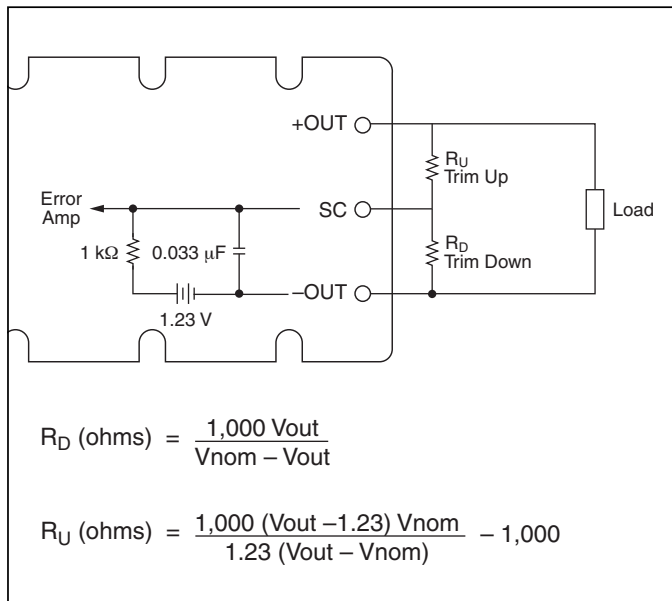

Figure 8 — Output voltage trim down and trim up circuit.

### Trim Down

1. This converter is not a constant power device – it has a constant current limit. Hence, available output power is reduced by the same percentage that output voltage is trimmed down. Do not exceed maximum rated output current.
2. The trim down resistor must be connected between the SC and pins. Do not bypass the SC pin directly with a capacitor.

### Trim Up

1. The converter is rated for a maximum delivered power. To ensure that maximum rated power is not exceeded, reduce maximum output current by the same percentage increase in output voltage.
2. The trim up resistor must be connected between the SC and pins. Do not bypass the SC pin directly with a capacitor.
3. Do not trim the converter above maximum trim range (typically +10%) or the output over voltage protection circuitry may be activated.

#### Trim resistor values calculated automatically:

On-line calculators for trim resistor values are available on the vicor website at:

[asp.vicorpower.com/calculators/calculators.asp?calc=1](http://asp.vicorpower.com/calculators/calculators.asp?calc=1)

Resistor values can be calculated for fixed trim up, fixed trim down and for variable trim up or down.

## PARALLEL BUS - PR PIN

### Parallel Operation

The PR pin supports paralleling for increased power with N+1 (N+M) redundancy. Modules of the same input voltage, output voltage, and power level will current share if all PR pins are suitably interfaced.

Compatible interface architectures include the following:

**AC coupled single-wire interface.** All PR pins are connected to a single communication bus through 0.001 μF (500 V) capacitors. This interface supports current sharing and is fault tolerant except for the communication bus. Up to three converters may be paralleled by this method. See Figure 9.

**Transformer coupled interface.** For paralleling four or more converters a transformer coupled interface is required. See Figure 10.

For details on parallel operation please refer to the

## **Warranty**

Vicor products are guaranteed for two years from date of shipment against defects in material or workmanship when in normal use and service. This warranty does not extend to products subjected to misuse, accident, or improper application or maintenance. Vicor shall not be liable for collateral or consequential damage. This warranty is extended to the original purchaser only.

EXCEPT FOR THE FOREGOING EXPRESS WARRANTY, VICOR MAKES NO WARRANTY, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

Vicor will repair or replace defective products in accordance with its own best judgement. For service under this warranty, the buyer must contact Vicor to obtain a Return Material Authorization (RMA) number and shipping instructions. Products returned without prior authorization will be returned to the buyer. The buyer will pay all charges incurred in returning the product to the factory. Vicor will pay all reshipment charges if the product was defective within the terms of this warranty.
